Shrink Sleeve Seam Sealing & Shrinking Instructions

Tools You Will Need For Assembly

- Cutting Board
- Exacto Knife
- Seam Sealing Pen or Cyanoacrylate Adhesive
- Steel Straight Edge
- Scotch Tape
- Blue Tape

Page 1 of 2

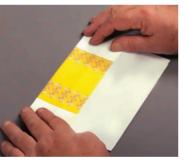

1.

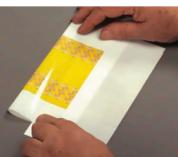

Fold over opposite edge to middle of the shrink sleeve. Be sure edges are parallel.

Flatten edge of fold by creasing with finger.

4.

Appy an even amount of Seam Sealing Adhesive to clear area of sleeve.

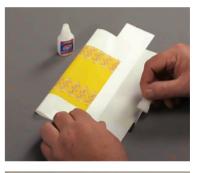

Fold over seam and seal seam. Be sure seam seals by running your finger across seam. Allow a few seconds

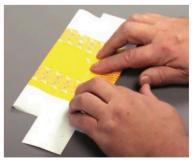

for the seam to dry.

6.

Trim top and bottom of shrink sleeve.

JetComp • 5400 Newport Drive, Unit 14 • Rolling Meadows, IL 60008 • Phone: 847.222.7100 • Fax: 847.222.7102 • www.jetcomps.com

JetComp is a division of Proofing Technologies Ltd.

3.

Place a strip of bond paper under edge of seam. This prevents seam adhesive from a ttacking image.

7.

Place the shrink sleeve over the container and shrink by applying even heat with a heat gun or hairdryer. A hot water bath or shrink tunnel will give you the fastest and most constitent shrinking. 200 degrees fahrenheit is a good heat setting.
